

FLAT LIGHTING STRUCTURE

ABSTRACT OF THE DISCLOSURE

The purpose of the present invention is to provide a flat lighting structure for a light source of a liquid crystal display (LCD). The flat lighting structure includes a light guide plate having a side, a light guide stick having two ends and disposed by the side of the light guide plate, and a first luminary and a second luminary disposed at the two ends of the light guide stick for providing a light, wherein the light guide stick further comprises a light guide concave disposed between the first luminary and the second luminary for guiding the light toward the light guide plate.
